## H-Series, HE-Models Motors at End of Production

**March 2, 2018 – Rochester, New York, USA** – ORMEC transitions the HE-Models of H-Series Servo Motors to End-of-Production.

Introduced in the late 1990's, the H-Series motors have been used on a broad range of applications initially with the ORION Motion Control System and then later, the SMLC and XD-Series Indexer.

These motors, have been available and continually supported throughout the entire production run and even today, they are still supported in the latest ORMEC Motion Control Systems including the XD-Series Indexer and all ServoWire® based Servo Drives with SMLC.

The H-Series Motors included in its model range, the HE-Model have continuous torque rating between 2.8 in-lb and 42 in-lb providing big performance in a small package. The specific models included are as follows:

- MAC-HE003A/xy
- MAC-HE003B/xy
- MAC-HE006A/xy
- MAC-HE006B/xy
- MAC-HE011B/xy
- MAC-HE021B/xy
- MAC-HE042B/xy

Where x and y specify encoder type and presence of a brake respectively.

Availability of products classified as End of Production is extremely limited. Once supplies are exhausted, they will be listed as obsolete. ORMEC will also continue to provide limited support and repair for motors in the field. All models of H-Series were set to Legacy Status July 31, 2017.

### About ORMEC

ORMEC's industry experts provide motion control solutions in the aerospace, automotive, energy, medical, pharmaceutical, food and beverage, textile, paper, packaging, metal forming and converting industries. Our systems excel in the most demanding applications including packaging, converting, labeling, web and material handling, as well as general assembly and winding.

Our highly reliable motion control solutions integrate motion controllers, logic control, servo drives, servo motors, linear motors, actuators, HMIs, and I/O into cost-effective factory automation solutions. ORMEC provides application expertise and systems solutions for all types of motion control challenges and offers a team of Systems and Applications Engineers with over 80 years of motion control experience. The company continues to be a leader in the development of motion control solutions and technology, including being the first to introduce an industrial motion control system using a high-speed FireWire network.
